

EXECUTIVE BRIEFING

The 30-second answer to “how’s the release?”

JIRA is the system of record. This is the system of understanding.

Leadership should not have to assemble the story.

Today, a status question means a JIRA filter, a Confluence page, a Slack thread, and a spreadsheet.
Tomorrow, it is one login – and a view already shaped for the person in the room.

01

See

Every committed Feature, across every active release, with RAG and remaining work.

02

Judge

A health verdict with named blockers – not a green badge with no receipts.

03

Ask

Plain English. Grounded in the release dataset. Ticket keys you can click.

04

Send

SoS, status email, brief – out the door from the same screen, not a copy-paste ritual.

The staff-meeting screen.

All active releases in one scroll. Features and Initiatives with AI exec summaries, gate dates, and done / remaining work – then Email SoS.

- No more walking the room Feature by Feature
- Risk is a color you can see from the back row
- The briefing you just reviewed is the briefing you send

Features

Key	Summary	Status	Risk	CC	CG	PG	Assignee	AI Summary	Breakdown
FEAT-17682	Database in Containers- PostgreSQL: LCM & Scaling	Execute Commit		10/Jul/2026	Not Set	Not Set	krunal.jhaveri	Stale Update	No data
FEAT-18523	Enhance NDB's k8s operator to be more dev friendly and secure	Code Complete Met		30/Apr/2026	Not Set	Not Set	manav.rajvanshi	Stale Update	No data
FEAT-18296	NDB - IAMv2 for DB on Containers - AuthN	Code Complete Met		13/May/2026	Not Set	Not Set	vasu.bansal	Stale Update	No data

Initiatives

Key	Summary	Status	Risk	CC	CG	PG	Assignee	AI Summary	Breakdown
ERA-43142	API server logging for NDB control plane deployed on SMSP - EA	Code Complete Met		02/Mar/2026	Not Set	Not Set	stefan.djuric	Stale Update	No data
ERA-39212	NDB v4 Alpha APIs Phase 1(without IAM Integration)	Code Complete Met		06/Mar/2026	Not Set	Not Set	deepak.srinath	Stale Update	No data
ERA-49546	Fresh Deploy of NDB Control Plane on SMSP	Closed		17/Oct/2025	Not Set	Not Set	rahul.khandelwal	Stale Update	No data
ERA-49552	Redesign Enable Multi cluster flow for NDB on	Closed		Not Set	Not Set	Not Set	shuryakumar.ns	Stale Update	No data

Live product – SoS Summary. Timeline plus Feature / Initiative rows. Email SoS from this screen.

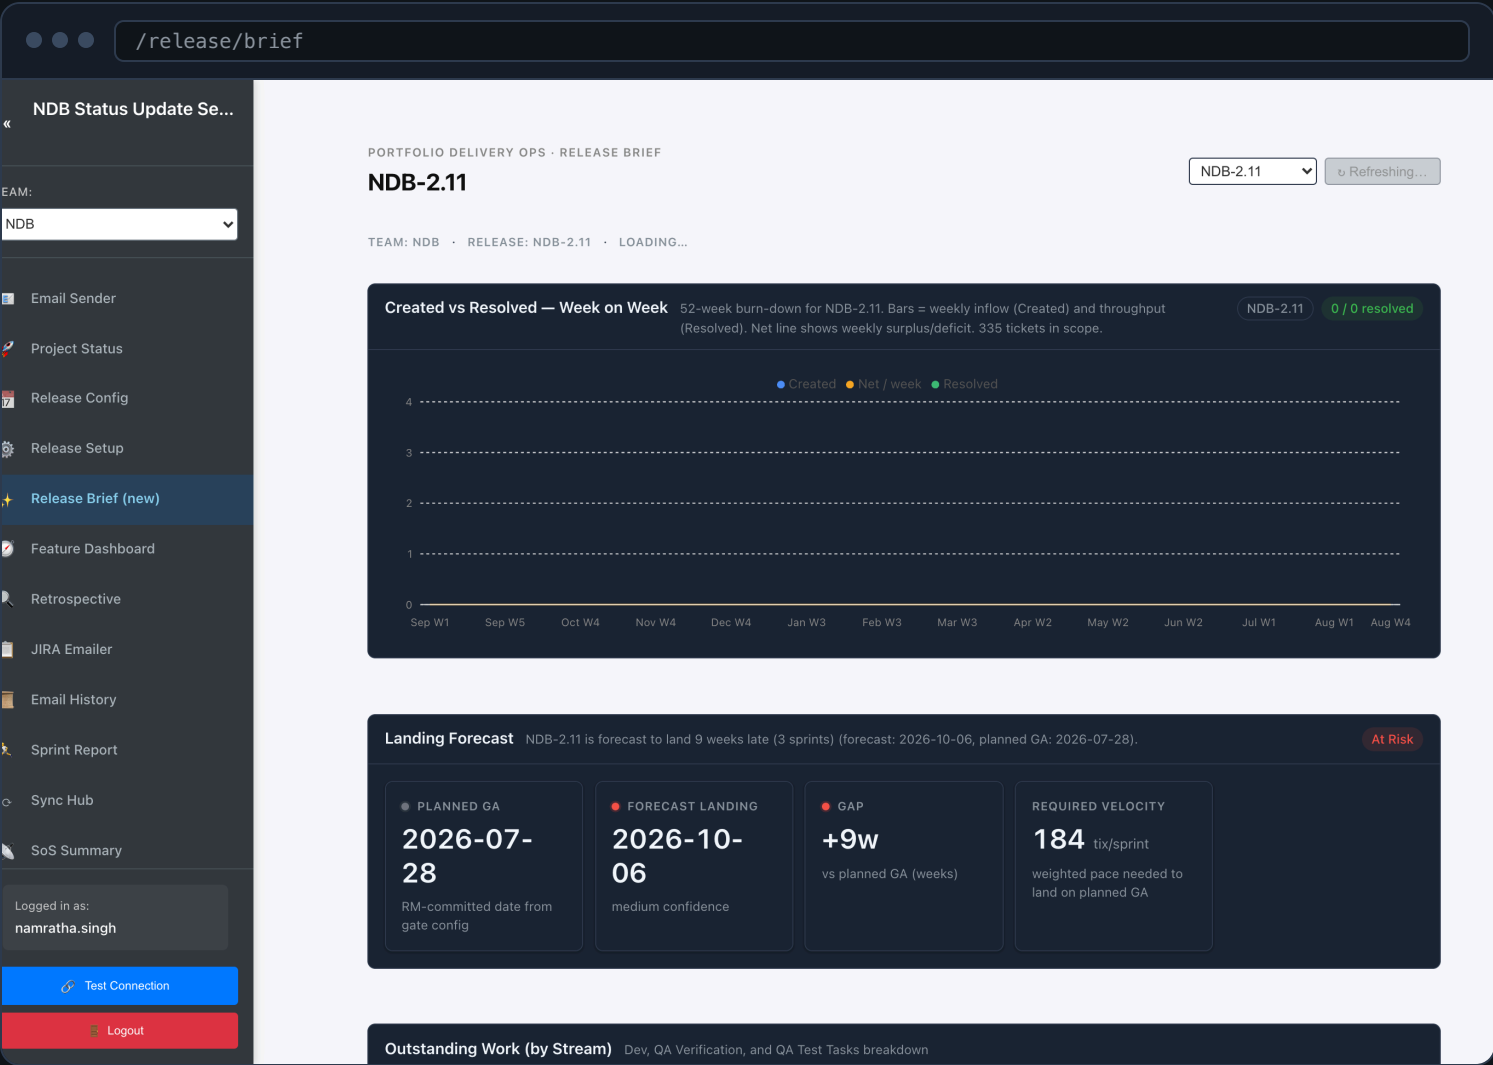

SOS SUMMARY

03 / 08

Health with receipts.

A one-pager for the release: payload, gates, outstanding work, landing forecast. The verdict is RAG. The evidence is ticket keys – never invented, always clickable.

- Open P0s and must-fix items named, not counted in the dark
- Green only when the board is actually clean
- Built for the person who will forward it upward

Live product – Release Brief for NDB-2.11. Burn-down, landing forecast, outstanding work.

See the timeline. Then ask the question.

NDB-2.12

Clear

Ask release, ticket, and risk questions grounded in cached release context.

Scope: single_release - releases: NDB-2.12 - keys: none

YOU

Give me the top risks for the current release in two sentences.

ASSISTANT

The most critical risks are the ten P1-priority tickets still open, covering SQL Server restore-state testing (ERA-67030), utilities development (ERA-66277), MySQL HA clone/manual testing (ERA-65856), multiple DBE feasibility analyses for GCP (ERA-65257, ERA-64478, ERA-64474), UI LPM enhancements (ERA-63579) and related backend work [source: releaseContext.NDB-2.12.summary.topPOP1Open].

Additionally, two security-focused internal pentest tickets remain open (SDL-13910 and SDL-13349), representing high-impact risk to compliance and serviceability [source: releaseContext.NDB-2.12.summary.topPOP1Open].

Ask about release health, blockers, or ticket status...

PROJECT STATUS · AI CHATBOT

05 / 08

Same dataset. Six more jobs.

Sprint

Sprint Report

Dev velocity, QA verification, and test work as three streams – not one misleading total.

Heat

Component Report

Which surface is on fire: P0/P1 age, deferrals, health per component.

Focus

Feature Dashboard

One FEAT. All children. Gate progress. Reconciliation against the release tag.

Honesty

Retrospective

Did teams honor CC / CG / PG / GA – or did the date move and the work follow later?

Outbox

Status Email

Confluence in, JIRA context in, SMTP out. History kept. No second tool.

Fresh

Sync Hub

The meeting starts with a dataset that was pulled on purpose – not last Thursday's cache by accident.

WHO IT IS FOR

One truth. The density changes. The facts do not.

VP / Director

RAG first. Risk register. Charts, not JQL. Counts that click.

TPM / RM

Gates, payload, must-fix, the email that leaves after the SoS.

FEAT / EM

One feature or one team. Remaining work. Sprint pulse.

Ops

Releases, permissions, sync – the machine behind the meeting.

| Product-agnostic by design. NDB is the first tenant. The same surface is built to carry the next product without a fork.

THE ASK

Walk into the next staff meeting with one URL.

See the release. Name the risk. Send the brief. Ask a follow-up in English. That is the whole pitch.
